Low-fi Prototype for Cart:

In terms of my design choices for the cart page, I wanted it to be as simple as possible, yet at the same time, the user can get a good glimpse of the items they bought and the cost of everything. The larger box is meant for the more detailed information about the items added in cart while the smaller box is meant for the more general information about the final cost of the items in the cart. This smaller box prevents users from having to calculate the costs themselves so that they are order their cinnamon rolls more efficiently. In addition, typically users would want to order their items once they see the final cost, so the “checkout” button is right beneath the cost summary to allow the user to quickly finalize their order.

(Hi-fi prototype on the next page)

Hi-fi Prototypes for Cart:

In terms of the color choices that I made on this design, it is very similar to the rest of the website, primarily browns and beiges. When the cart is empty, the button is not as vibrant and almost grayed out to suggest that the user needs to add items to cart in order to make a final order. Once items are added to cart, then the user can clearly see the “Proceed to Checkout” button to finalize their order. The cart also gives a clear warning if there are no items in cart. When an item is added to cart, users have the option to delete the item, change the quantity, or change the glaze. This provides flexibility if they want to change their mind about certain options without having to close the webpage and start over again. One change I also made was the cart information that appears in the header. Originally, I had an icon there with the number of items partially covering the icon. However, I ended up switching over to simple text because the icon being partially covered with the text may confuse users into the actual number of items in cart.
